CLINITOUCH

Refreshing Healthcare

Caring for patients with multiple long term conditions

CLINITOUCH telehealth moves the balance and focus of existing models of care to one which promotes health and well-being.

As well as empowering patients in understanding their condition, it allows for clinical monitoring of medical conditions providing an early notification of disease exacerbation, improving patient quality of life and avoiding hospital admissions.

CLINITOUCH enables patients to receive personalised care through an easy to use monitored electronic system at a time of their choosing, in a location of their choice.

HELPING YOU DELIVER

CASE STUDY*

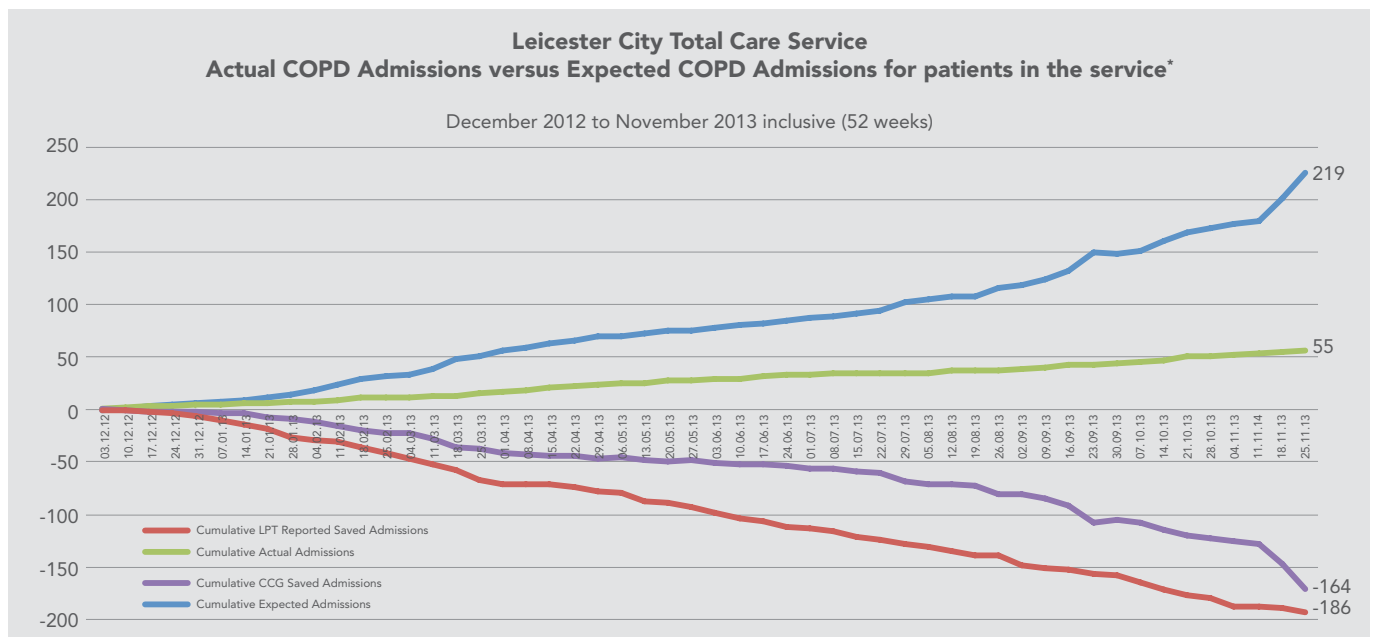

Collaborative approach to delivering a new model of care: Leicester City Total Care Service (50 patients)*

Objectives:

- Prevent acute exacerbations and reduce hospital admissions
- Enhance case management capacity
- Support early discharge and care at home
- Promote health, self-care and patient well-being
- Match care to need creating individual plans and care pathways

Results:

The complete telehealth package:

Service development and pathway redesign

Bespoke service cost model utilising real time data to evaluate the most appropriate service level and show potential cost savings. We will work with you to ensure all stakeholders agree protocols and governance for new pathways.

Patient identification, enrolment and personalised education

The key to success is selecting clinically appropriate patients and keeping them engaged. Our Clinical Services team help you in identifying patients and provide one-to-one educational training for patients to ensure adherence to the programme.

Implementation support and training for clinicians

Our Project Management Team can work with you to manage the roll-out, monitor progress and evaluate the project. Our Clinical Services team will help in training staff on capabilities of the system to flag interventions, set biometric vital sign settings and produce reports to track trends.

Provision of hardware and software management

If you chose to manage the process we are able to supply the equipment with a managed service offering.

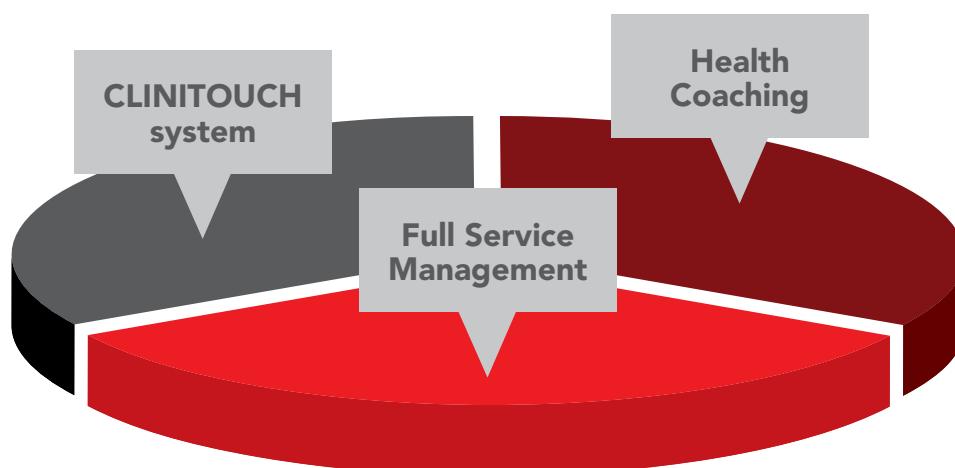

Full technical support

We have a 24/7 freephone service that is non-automated to ensure that you and your patients will have access to technical support when you need it.

Quality Assurance and Governance

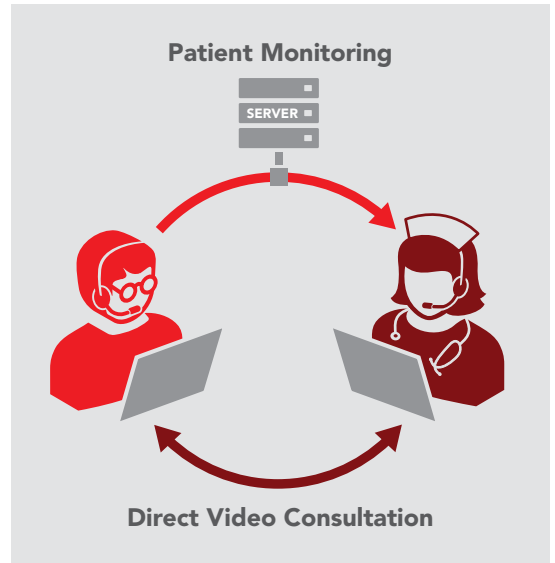

Fully auditable system, intergrates with NHS information systems, and conforms to all aspects of information governance.

The system:

Other hardware and peripherals are available

CLINITOUCH is a proven Telehealth system tried and tested for over 15 years.

Key features include:

- Video conferencing - allowing real time interaction between patient and clinician
- Mobile Connectivity - no need for broadband or hard wiring
- Simple to use software - allowing clinicians and patient to work easily
- Patient Friendly - large touch screens, voice aided instructions
- Suitable for multiple users
- Wide range of peripherals - for COPD, CHF, Diabetes, Stroke, Co-Morbid Individuals
- Ability to monitor patients understanding of condition
- Clinical results are transmitted automatically into the software - omitting user error
